Amendments to the Claims

Please amend the claims as follows:

Claim 1. (currently amended) A method for delivering medical assistance to a <u>patient</u> traveler while visiting in a foreign country, the traveler utilizing a client system, the method comprising the steps of:

        displaying one or more selection buttons on a display of the client system, wherein each selection button is associated with at least one type of medical assistance;

        receiving a selection of one of the selection buttons;

        sending a request to a server; and

        the server delivering to the client system the medical assistance associated with the selected button;

        wherein the request determines that the medical assistance is delivered in a form selected from the group consisting of a language associated with the foreign country and a format customized to the foreign country.

Claim 2. (currently amended) The method of claim ~~Claim~~ 1, wherein the step of delivering the medical assistance comprises selecting medical assistance from a group consisting of:

        information on the availability of medical services in the foreign country,

        a translation of a prescription into the language associated with the foreign country,

        a translation of medical information associated with the traveler into the language associated with the foreign country,

        medical referral information in the language associated with the foreign country,

        online medical consulting in a preferred language of the traveler, and

        online drug consultation in a preferred language of the traveler.

Claim 3. (currently amended) The method of claim ~~Claim~~ 1, wherein the at least one type of medical assistance associated with a selection button includes the provision of an over the counter (OTC) prescription available in the foreign country.

Claim 4. (currently amended) The method of claim ~~Claim~~ 1, wherein the client system and server system communicate via the Internet and the step of sending the request to the server comprises sending the request over the Internet.

Claim 5. (currently amended) The method of claim ~~Claim~~ 1, further comprising a life saving article, the life saving article identifying emergency medical information that is related to the traveler and a URL for the server, and the step of sending a request to a server further comprises sending the request to the URL identified on the life saving article.

Claim 6. (currently amended) The method of claim ~~Claim~~ 5, wherein the life saving article is selected from a group consisting of a necklace with a notice plate, a plastic card, a key-holder with a medical plate, and a sticker.

Claim 7. (currently amended) The method of claim ~~Claim~~ 5, wherein the life saving article comprises an emergency password and the step of sending a request to the server further comprises sending the emergency password.

Claim 8. (currently amended) The method of claim ~~Claim~~ 1, further comprising a medical measurement device that can be attached to the traveler and is operable to take certain medical measurements of the traveler, and the method further comprises the step of taking the certain medical measurements and transferring the certain medical measurements to the server.

Claims 9 - 25 (canceled)

Claim 26. (currently amended) A server for delivering medical assistance to a <u>patient</u> traveler, the server being accessible by a traveler who is traveling in a foreign country and operating a client device, the server comprising:

a communication module <u>executing within the server and</u> operative to communicate information illustrating a display of one or more selection buttons on a display of the client device, wherein each selection button is associated with at least one type of medical assistance;

a communication module <u>executing within the server and</u> operative to receive a selection of one of the selection buttons;

a database access module <u>executing within the server and</u> operative to access at least one of: a medical services and clinics database, a prescription database, a sickness database and a referral database; and

a web-page generating module <u>executing within the server</u> for delivering the medical assistance associated with the selected button;

wherein the selection received by the communication module determines that the medical assistance is delivered in a form selected from the group consisting of a language associated with the foreign country and a format customized to the foreign country.

Claim 27. (currently amended) The system of claim ~~Claim~~ 26, wherein said server communicates with said client device via the Internet.

Claim 28. (currently amended)   The system of claim ~~Claim~~ 26 additionally comprising a life saving article selected from a group consisting of a necklace with a notice plate, a plastic card, a key-holder with a medical plate, and a sticker, wherein said life saving article comprises a URL for the server for enabling the sending of a request to a server via said URL.

Claim 29. (currently amended)   The system of claim ~~Claim~~ 26 additionally comprising a medical measurement device operative to be attached to said traveler and to take medical measurements of said traveler and to transfer said medical measurements to said server.

Claim 30. (currently amended) A method for delivering medical assistance to a <u>patient</u> traveler while visiting in a foreign country, the traveler utilizing a client system, the method comprising the steps of:

displaying one or more selection buttons on a display of the client system, wherein each selection button is associated with at least one type of medical assistance;

receiving a selection of one of the selection buttons;

sending a request to a server; and

the server

accessing at least one of: a medical services and clinics database, a prescription database, a sickness database and a referral database; and

delivering the medical assistance associated with the selected button;

wherein the selection determines that the medical assistance is delivered in a form selected from the group consisting of a language associated with the foreign country and a format customized to the foreign country.
